

Genotek Biochem

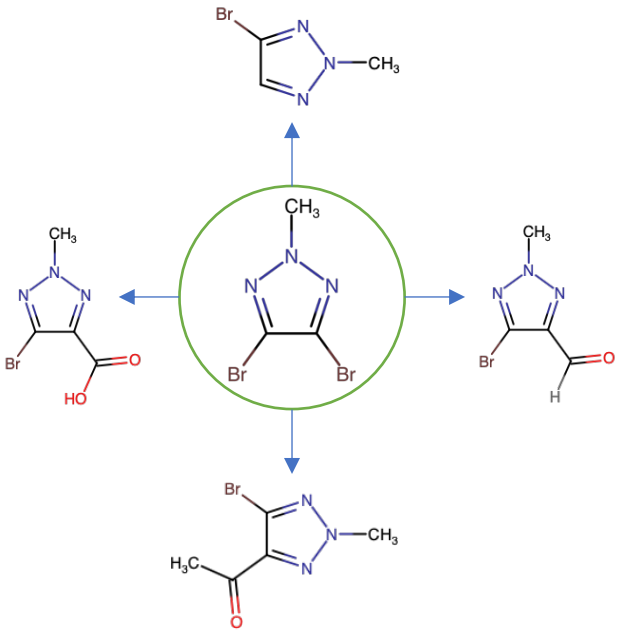

4,5-Dibromo-2-methyl-2H-1,2,3-triazole CAS No. 28938-17-2

It is a heterocyclic organic compound belonging to the class of triazoles. Key features of this molecule include:

- This is molecule is a five-membered heterocyclic ring with alternating nitrogen and carbon atoms.
- In this specific case, the molecule has two bromine atoms (Br) at positions 4 & 5, a methyl group (CH3) at position 2, and a hydrogen atom (H) attached to one of the nitrogen atoms (marked by 2H to indicate it is not aromatic).
- The presence of two bulky bromine atoms at positions 4 & 5 likely affects the molecule's overall shape and reactivity.
- The methyl group at position 2 might influence its solubility and interactions with other molecules.

Applications:

- Biological activity including anti-microbial, anti-fungal & anti-cancer activities.
- Triazole derivatives show application in organic electronics & sensors, due to their property of thermal stability.
- Triazoles are also used in many substitutions and acid-base reactions.

Genotek is offering 4,5-Dibromo-2-methyl-2H-1,2,3-triazole with HPLC purity ≥ 95 %

Production scales range from few grams to multi-hundred kilograms.

Genotek Biochem Private Limited

HQ: 216, Vardhaman Complex, 10, LBS Marg, Vikhroli West, Mumbai 400083, MH, INDIA.

Facility: Sub Plot 12, Plot 40, Ramtekdi Industrial Area, TPS II, Hadapsar, Pune 411013, MH, INDIA.
