Cyclopropylboronic acid

CAS No. 411235-57-9

Cyclopropylboronic acid is a key reagent used in organic chemical synthesis for creating complex carbon-carbon bonds, especially for building molecules containing the cyclopropyl motif.

It has been used in development of novel drugs, material sciences, development of new polymers and materials with specialised properties.

Usage of Cyclopropylboronic acid provides for better air and water stability in coupling reactions, enabling improved yields.

Some known applications for Cyclopropylboronic acid:

- Microwave-assisted Copper(II) catalyzed N-cyclopropylation
- Nickel & Copper catalyzed Suzuki-Miyaura coupling reaction of arenes
- Palladacycle catalyzed Suzuki-type cross-coupling with a range of aryl and heteroaryl halides, especially bromides
- Palladium(0) catalyzed cyclopropane C-H bond functionalization
- Palladium-catalyzed decarboxylative coupling
- Palladium-catalyzed ligand directed oxidative functionalization of cyclopropanes
- Cyclopropylating reagent (e.g.: copper promoted S-cyclopropylation of thiophenol)
- Synthesis of Cycloprypylhydrazine salts for higher yields

Genotek is offering Cyclopropylboronic acid with a GC purity of ≥98% at Kilo scale
