

Genotek Biochem

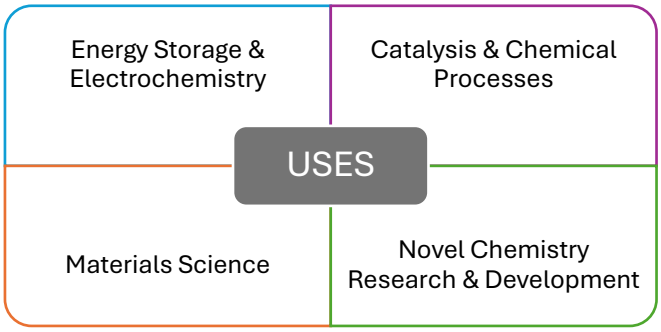

N,N'-Phenazine disodium dipropionate

CAS No. 2056879-97-9

High performance Redox-active salt

It is a functional phenazine based organic salt designed for applications requiring efficient redox activity, aqueous compatibility, and structural tunability.

Built on a phenazine aromatic core and functionalized with propionate groups, this compound combines electron-transfer capability with high water solubility, making it particularly valuable in electrochemical systems, energy storage technologies, and advanced materials research.

Why Choose N,N'-Phenazine-disodium dipropionate?

Redox-Active Core	Water-soluble Ionic Form	Functional Side-Chains	Process-friendly Material
• Enables reversible electron transfer. • Electrochemical and catalytic systems. • Supports energy storage and redox cycling applications.	• Disodium salt ensures excellent solubility in aqueous systems. • Enables use in water-based systems. • Ideal for green chemistry.	• Dipropionate groups enhance stability & handling • Improve process compatibility • Allow further chemical derivatization	• Good stability under standard lab conditions. • Scalable from R&D to production. • Reliable for reproducible experimentation.

BATTERY TECHNOLOGY APPLICATIONS

REDOX FLOW BATTERIES (RFBS)
Active material for AORFBs
Cost-effective organic alternative to vanadium systems

ELECTRON SHUTTLE / REDOX MEDIATOR
Improving charge transfer kinetics and energy efficiency

ORGANIC CATHODE MATERIALS
Cathode-active material in organic batteries
Component in polymer-bound electrode systems

AQUEOUS BATTERY SYSTEMS
High water solubility
Non-flammable
Safer, eco-friendly energy storage

FLOWABLE & LIQUID ELECTROLYTE
Suitable for flowable liquid electrolytes enabling scalable energy storage

RESEARCH & NEXT-GEN ENERGY SYSTEMS
Platform for next-generation organic battery research and high-performance systems

Genotek offers N,N'-Phenazine disodium dipropionate from few grams to multi-kilograms with purity ≥ 98%
